

Chefs define and put menu for next month into the system

Client visits page and reads the menu for current day or other days of current week.

Client registers to system

Client logs in to system

Client composes an order from daily menu. There are two main dishes and two desserts for each day. He can choose among them and define quantity depending on stock state. He sees the info (or warning) about expected delivery time.

Client places an order. He is redirected to payment gate. The order changes status for "pending for payment.".

Client is redirected to payment gate where he completes the payment process. The gate returns success or failure status. If successful order changes it status to "processing your order" and client is redirected back to info page containg delivery time and status. In case of payment failure client is asked to repeat payment.

Emlpoyer is noticed by system about succesful payment . He prepares order to be collected by delivery man. Order changes status for "proceeding". Message is sent to free delivery man.

Delivery man recieves message from system. He confirms collection of an order. He gets assigned to the order. After succesful delivery collection delivery man changes order status for "on the way".

Delivery man delivers order and changes status of delivery for "Delivered".

Client sees the order and delivery status on info page.

Client changes account details - defines, modifies and deletes user data.

Client displays order history.
